

CAREER OBJECTIVE

Targeting a challenging role as a Java Backend Developer to leverage expertise in Java, Spring Boot, JPA, Hibernate and microservices architecture to design scalable and high-performance backend systems. Aiming to contribute to robust application development, efficient API design, and cloud-based solutions.

CORE COMPETENCIES

- Software Development Lifecycle
- Microservices Architecture
- Event-Driven Architecture
- API Design
- Java Development
- Database Schema Design
- SQL Query Optimization
- TDD (Test-Driven Development)
- Serverless Architecture
- Unit Testing & Code Reviews
- JWT Authentication

EDUCATION

- Master of Science in Computer Science — GPA: 3.6/4.0
Saint Louis University, USA | Jan 2021 – Dec 2022
- Bachelor of Science in Computer Science — GPA: 3.3/4.0
VNR VJIET, Hyderabad, India | Sep 2012 – May 2016

RAJU KARMURI

PROFILE SUMMARY

- Led the design and implementation of cutting-edge cloud solutions in the role of Software Engineer at the Enterprise and government organizations, driving innovation and operational efficiency.
- Knowledge in multiple programming languages and frameworks, such as **Java**, **React.JS**, and **Spring Boot**, enhancing software development capabilities.
- Achieved a substantial decrease in manual effort by designing and implementing a secure document management **workflow that streamlines operations** and enhances productivity.
- Developed and maintained scalable, high-performance backend services using Java, Spring Boot, JPA and Hibernate frameworks.
- Designed and implemented **RESTful APIs and microservices** to support web and mobile applications.
- Optimized application performance through **code refactoring, database query tuning**, and caching strategies.

WORK EXPERIENCE

Software Engineer – Backend Developer, **Zyxware Technologies** | Austin, USA | Nov 2024 – May 2025

Client: U.S. Department of Labor – OWCP Modernization Program

- Architected a secure document-automation backend supporting six federal programs, enabling S3-based claim ingestion and automated Textract workflows.
- Designed REST endpoints using **API Gateway and Pre-Signed URLs**, allowing Appian users to upload **11MB+ files** securely through isolated S3 access points.
- Modernized the Treasury Management System backend by implementing Spring Boot microservices, significantly improving scalability and operational resilience.
- Led code reviews and enforced SonarQube quality standards, reducing production defects and ensuring compliance with government-grade security requirements.
- Automated **AWS infrastructure** provisioning using Terraform integrated with GitLab CI and Jenkins, cutting deployment time by **60% and enhancing release stability**.
- Developed event-driven microservices using **AWS Lambda and CloudWatch** to process uploaded documents and categorize patient data into structured workflows.
- Participated in code reviews and agile ceremonies, contributing to sprint planning, backlog refinement, and retrospective discussions.
- Monitored and diagnosed **production incidents**, performed root cause analysis, and implemented long-term corrective and preventive measures.

Software Engineer – Java Backend Developer, **The Drop Times** | Saint Louis, USA | Sep 2024 – Oct 2024

- **Built** ~12 Spring Boot APIs for Task & Leave Management systems with secure CRUD operations, pagination, and filtering features.
- **Implemented** JWT-based authentication with React Auth Context, **securing role-based access** for ~15 internal users.
- **Optimized** RESTful APIs, **improving data retrieval performance by 25%** and ensuring future scalability.
- **Designed** MySQL schema using JPA/Hibernate, enhancing data integrity and query efficiency.
- **Streamlined** backend database operations by reducing redundant DB calls and optimizing queries.
- **Deployed** applications using Maven, developing Java services in Visual Studio Code and relational database schemas in MySQL/MariaDB.

Software Engineer – Backend Developer, **Saint Louis University** | Saint Louis, USA | Apr 2023 – Sep 2024

- **Engineered** serverless data-processing backend with Lambda + S3, **automating CSV transformations** and cutting manual workflows by 50%.
- **Created** secure upload-to-download REST workflows with event-driven execution and dynamic Excel report generation using Pandas.

TECHNICAL SKILLS

- ● Programming Languages: Java, PHP, Python, JavaScript, Node.js, React.js
- ● Cloud & DevOps: AWS (Lambda, CDK, S3, CloudWatch, API Gateway, CloudTrail, IAM, Textract, Transcribe, Bedrock), Terraform, Jenkins, GitLab CI/CD, Docker, Kubernetes
- ● Frameworks: Spring Boot, Express.js, React (Micro Frontend Architecture), RESTful APIs
- ● Security: OAuth2.0, JWT, IAM, secure API design
- ● AI/ML Interests: Exploring use cases involving Amazon Bedrock, RAG (Retrieval-Augmented Generation), OpenAI API
- ● Other: MySQL, MongoDB, Maven, Git

- **Developed** Scantron grading backend using Flask APIs + OpenCV, generating detailed automated score reports.
- **Led** a 5-member Agile team, coordinating sprint planning, issue tracking, code reviews, and stakeholder communication.
- **Re-architected** AWS pipeline into PHP APIs on cPanel, **enabling portability** off AWS infrastructure.

Software Engineer – Enterprise Systems, IBM | Bangalore, India | Sep 2016 – Dec 2020

Client: FedEx Express & Freight (100K+ transactions/day)

- **Automated** CA7 batch pipelines (JCL) for FedEx logistics, **minimizing downtime** and preventing costly dispatch failures.
- **Performed** root cause analysis using IMS, CICS, and DB2 logs, **enhancing fault recovery efficiency by 40%+.**
- **Applied** patches across 5 mission-critical platforms (XPTR, IOF, InterTest, CA7, SAS) to ensure secure, compliant, and high-availability operations.
- **Streamlined** maintenance workflows during GDPS migration, enabling **resilient distributed system failover.**
- **Collaborated** with cross-functional teams including DB2 developers and operations, maintaining high-performance backend systems under heavy transactional loads.
